## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 16, 1 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sakarda et al.

With respect to claim 16, figures 1 and 2 of the reference show a mobile electronic apparatus 110, comprising communication interface 108a, display 101, and a controller 226 controlling moving multimedia data receipt (from cd rom device 119, or dvd device - column 4, line 45), which drives the display. 120 would be a mobile apparatus stand detachably connectable with apparatus 110, also having a communication interface (108b), moving multimedia data storage reproducer (dvd device). and controller (236, pci bus 2). An input reproduction command would have been obvious, because computer peripheral devices such as a dvd player respond to such input produced when a user types or clicks a mouse. When the stand 120 is connected to computer 110, the computer operates in conjunction with the stand, and when they are disconnected, the computer operates independently from the stand (because it is a notebook computer).

With respect to the additional features of claim 1, there would have to be some sort of "input body control signal" from the docking station to the computer, because

Art Unit: 2811

otherwise the computer would not know how or when to play the A/V signal produced by the peripheral dvd device. Note also that the reference teaches "hot docking," at for example column 3, lines 40-45, so that device inserted into the device bays on the bus within the docking station are recognized immediately by the computer. Such recognition would have to be by means of some sort of input signal from the docking station and its newly-inserted device, which would be a control signal independent from the A/V signal itself.

Claims 2-10 would be allowable if expressed in completed form, including all of the limitations of the independent claim, and any intervening claim.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to S. Crane, whose telephone number is (571) 272-1652.

The supervisor for Art Unit 2811, Eddie Lee can be reached on (571) 272-1732. The fax phone number for the organization where this application or proceeding is assigned is (571) 273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
